

THE STORY

Voyse International, a professional contact center in Belize, faced the challenge of managing a multi-floored facility efficiently. With 22 doors to secure, their primary concerns included the intricate task of managing access permissions for multiple floors. Voyse sought advanced security measures, incorporating biometric technology

and RFID multiple credentials access, with varying permissions based on the specific floor.

CUSTOMER:

SOLUTION HIGHLIGHTS: EMPOWERING SECURITY AND EFFICIENCY

Voyse International's solution addressed their specific needs with a comprehensive approach to access management. A tailored system facilitated the seamless management of different access permissions across multiple floors in the building. The integration of biometric technology and RFID multiple credentials access offered a flexible and secure solution, accommodating the diverse needs of each floor. This not only streamlined operational processes but also enhanced security, ensuring that access was both efficient and tailored to the unique requirements of each floor.

To provide an extra layer of security, anti-spoof biometrics were implemented, adding a robust level of protection specific floors and restricted areas. This comprehensive solution not only met Voyse International's challenges in managing a multi-floored facility but also elevated security measures, offering an advanced and tailored access management system..
