THE STORY

Sanitas Colombia, a prominent healthcare provider with an extensive network of 20 locations, faced the challenge of efficient management across numerous facilities. Securing 200 doors, their primary concerns included the seamless management of multiple locations through the internet on a single platform. They also prioritized touchless hygienic technology for healthcare professionals and sought seamless integration with a third-party Time and Attendance (T&A) and surveillance system developed by a trusted partner.

SOLUTION HIGHLIGHTS: EMPOWERING SECURITY AND EFFICIENCY

Sanitas Colombia's solution addressed their critical needs with advanced healthcare security and operational efficiency. A centralized platform facilitated seamless management of their extensive network through the internet, offering unified oversight across 60 locations. The implementation of touchless hygienic technology biometric for healthcare professionals enhanced safety and hygiene in critical areas. The seamless integration with a third-party T&A and surveillance system developed by a trusted partner streamlined operational processes, ensuring a cohesive and comprehensive solution.

To meet the requirement for critical mission-grade systems, the solution was tailored to provide the highest level of reliability and security. Anti-spoof biometrics and integration with third-party access systems using Mifare 1k credentials further fortified the access control infrastructure. This comprehensive solution not only met the unique challenges of managing a vast healthcare network but also elevated security measures, offering Sanitas Colombia an advanced and tailored access management system.
