

# SUCCESS STORIES

## THE STORY

Copan Diagnostics Inc, a worldwide reputation laboratory testing company, faced the challenge of managing access efficiently with a global perspective. With 12 doors to secure, their primary concerns included establishing a reporting system via the cloud, centrally managed by the corporate office in Europe. Copan

Diagnostics sought advanced security measures, opting for RFID and Bluetooth credentials verification, with an emphasis on a seamless and easy-to-use interface portal.

## CUSTOMER:

### SOLUTION HIGHLIGHTS: EMPOWERING SECURITY AND EFFICIENCY

Copan Diagnostics Inc's solution addressed their unique needs by implementing a globally accessible access management system. A cloud-based reporting system allowed for centralized management by the corporate office in Europe, ensuring efficient oversight. The integration of RFID and Bluetooth credentials verification provided advanced security measures, enhancing access control capabilities across the 12 doors. The seamless and easy-to-use interface portal streamlined user interactions, making access management straightforward for the end-users.

To ensure a secured installation, an I/O controller was incorporated, adding an additional layer of protection to the overall access control infrastructure. This comprehensive solution not only met Copan Diagnostics' challenges in managing access on a global scale but also elevated security measures, offering an advanced and user-friendly access management system for their singular location.

#### PAIN POINTS SOLVED
