

SUCCESS STORIES

THE STORY

Children of America operates a network of over 60 schools across various states in the U.S., serving students, parents, and staff in locations from Connecticut to Texas. With two doors to secure at each location, their primary challenges included remote

enrollment for both parents and teachers, seamless integration with a third-party signature system via Wiegand, and the need for remote management of all schools from a central corporate office.

CUSTOMER:

SOLUTION HIGHLIGHTS: EMPOWERING SECURITY AND EFFICIENCY

Children of America's solution addressed these challenges by implementing a cloud-based platform that allows corporate office staff to manage all locations remotely. The system integrates with third-party signature systems using Wiegand, ensuring secure and streamlined sign-in processes. Remote enrollment capabilities for parents and teachers made onboarding effortless, while the integration of the parent database via API enhanced user management.

The solution also provided a user-friendly interface for school staff, simplifying day-to-day operations and improving overall efficiency. This approach not only enhanced security across all locations but also optimized operational processes for a smooth and reliable experience.
